

Geotechnical Modeling Software

Slope Stability : SLOPE/W

SLOPE/W is the leading slope stability CAD software product for computing the factor of safety of earth and rock slopes.

Seepage Analysis : SEEP/W

SEEP/W is a finite element CAD software product for analyzing groundwater seepage and excess pore-water pressure dissipation problems within porous materials such as soil and rock.

Stress and Strain Analysis : SIGMA/W

SIGMA/W is a finite element CAD software product that can be used to perform stress and deformation analyses of earth structures. Its comprehensive formulation makes it possible to analyze both simple and highly complex problems.

Dynamic Analysis : QUAKE/W

QUAKE/W is a geotechnical finite element CAD software product for the dynamic analysis of earth structures subjected to earthquake shaking, or point dynamic forces from a blast or a sudden impact load. 3

Contaminant Transportation : CTRAN/W

CTRAN/W is a finite element CAD software product that can be used to model the movement of contaminants through porous materials such as soil and rock.

Air Flow Analysis : AIR/W

AIR/W is a finite element CAD software product for analyzing groundwater-air interaction problems within porous materials such as soil and rock.

Temperature : TEMP/W

TEMP/W is a finite element CAD software product for analyzing thermal changes in the ground due to environmental factors or the construction of facilities such as buildings or pipelines.

Unsaturated Soil Analysis : VADOSE/W

VADOSE/W is a finite element CAD software product for analyzing flow from the environment, across the ground surface, through the unsaturated vadose zone and into the local groundwater regime.
